</table>

Add rows if necessary. The organisation of teaching and the teaching methods used are described in detail at (d).

**COURSE TYPE**

Specialized general knowledge

**PREREQUISITE COURSES:**
Recommended prerequisite knowledge: Linear Algebra, Calculus

**LANGUAGE OF INSTRUCTION and EXAMINATIONS:**
Greek (English if there are Erasmus students)

**IS THE COURSE OFFERED TO ERASMUS STUDENTS?**
Yes

**COURSE WEBSITE (URL)**

### (2) LEARNING OUTCOMES

**Learning outcomes**
The course learning outcomes, specific knowledge, skills and competences of an appropriate level, which the students will acquire with the successful completion of the course are described.

Consult Appendix A

- Description of the level of learning outcomes for each qualifications cycle, according to the Qualifications Framework of the European Higher Education Area
- Descriptors for Levels 6, 7 & 8 of the European Qualifications Framework for Lifelong Learning and Appendix B
- Guidelines for writing Learning Outcomes

**Upon conclusion of the course the students ought to be able to:**
To know the meaning of the concepts described in the syllabus and be able to use ideas and technics presented, either to solve relevant problems or even describe some typical phenomena from real life with the aid of these concepts.

**General Competences**
Taking into consideration the general competences that the degree-holder must acquire (as these appear in the Diploma Supplement and appear below), at which of the following does the course aim?

- Search for, analysis and synthesis of data and information, with the use of the necessary technology
- Adapting to new situations
- Decision-making
- Working independently
- Team work
- Working in an international environment
- Working in an interdisciplinary environment
- Production of new research ideas
- Project planning and management
- Respect for difference and multiculturalism
- Respect for the natural environment
- Showing social, professional and ethical responsibility and sensitivity to gender issues
- Criticism and self-criticism
- Production of free, creative and inductive thinking
- Others...
• Search for, analysis and synthesis of data and information, with the use of the necessary technology
• Adapting to new situations
• Decision-making
• Team Work
• Working in an interdisciplinary environment
• Criticism and self-criticism
• Production of free, creative and inductive thinking

(3) SYLLABUS

• Special topics from Linear Algebra such as the pseudoinverse matrix, SVD decomposition, Schur factorization.
• Various applications such as Data compression using SVD, Bezier curves, Computer graphics, Computed tomography, Markov chains, Search engines.
• Existence and uniqueness for initial value problems for a single ordinary differential equation (ODE) or for a system of ODEs.
• Population models.
• RLC circuits,
• Linear systems, generalized eigenvectors, the fundamental matrix solution.
• Linear Dynamical systems, dynamics in two dimensions, stable, unstable and center subspaces.
• Nonlinear Dynamical Systems, linearization around an equilibrium, linearization around a periodic orbit, Chaos.

(4) TEACHING and LEARNING METHODS - EVALUATION

<table>
<thead>
<tr>
<th>DELIVERY</th>
<th>Face-to-face and distance learning. Tutorials and laboratory sessions with exemplary solutions of exercises.</th>
</tr>
</thead>
<tbody>
<tr>
<td>USE OF INFORMATION AND COMMUNICATIONS TECHNOLOGY</td>
<td>ICT methods are used in both teaching and communication with the students. Lecture slides and supplementary material are uploaded in the course’s web site.</td>
</tr>
<tr>
<td>TEACHING METHODS</td>
<td>The manner and methods of teaching are described in detail. Lectures, seminars, laboratory practice, fieldwork, study and analysis of bibliography, tutorials, placements, clinical practice, art workshop, interactive teaching, educational visits, project, essay writing, artistic creativity, etc. The student’s study hours for each learning activity are given as well as the hours of non-directed study according to the principles of the ECTS</td>
</tr>
<tr>
<td>Activity</td>
<td>Semester workload</td>
</tr>
<tr>
<td>Lectures</td>
<td>3*13=39</td>
</tr>
<tr>
<td>Tutorials (exercises)</td>
<td>2*13=26</td>
</tr>
<tr>
<td>Study and solving exercises</td>
<td>5*13=65</td>
</tr>
<tr>
<td>Preparation for and final examination</td>
<td>10</td>
</tr>
<tr>
<td>Course total (25-30 hours per ECTS unit)</td>
<td>140</td>
</tr>
</tbody>
</table>
STUDENT PERFORMANCE EVALUATION

Description of the evaluation procedure

Language of evaluation, methods of evaluation, summative or conclusive, multiple choice questionnaires, short-answer questions, open-ended questions, problem solving, written work, essay/report, oral examination, public presentation, laboratory work, clinical examination of patient, art interpretation, other

Specifically-defined evaluation criteria are given, and if and where they are accessible to students.

The language of evaluation is Greek (English in the case of attendance by foreign students).

Method of evaluation: The final grade is based either 100% on performance on the final written Examination, or on a final exam on part of the material taught plus a midterm test. The exact method of evaluation is shown from the beginning of the semester in the eclass page of the course.

Grading scale 0-10.
• Passing grade greater than or equal to 5
