Company Overview

We are developing cutting-edge proprietary trading algorithms specializing in leveraging data to generate alpha. Our team of quantitative analysts, traders and developers work together to analyze vast amounts of market data, uncover patterns, and identify inefficiencies. Our mission is to stay ahead of the market by constantly innovating and adapting, using data to make informed decisions that drive superior returns.

Job Description: Software Engineer

Position Overview: We are looking for a skilled **Software Engineer** with expertise in automating pipelines and improving operational processes. The ideal candidate will have strong coding abilities, experience with production-level systems, and a passion for building tools that streamline team workflows. You must have excellent communication skills, attention to detail, and the ability to work independently in a fast-paced environment.

Key Responsibilities:

- **Automate pipelines** based on provided specifications to enhance operational efficiency.
- Write **clean, scalable code** to develop tools that are utilized across the team
- **Improve existing pipelines** by identifying areas for optimization and implementing solutions
- **Set up alerts** to proactively monitor system health and identify potential issues early
- **Manage operations** and respond to alerts, ensuring smooth, uninterrupted workflow processes
- **Monitor and manage alerts** to ensure continuous performance and system reliability

Skills and Qualifications:

- We seek individuals with exceptional credentials, driven to innovate and excel
- Proven **experience working with production-level code**, ensuring it is reliable and efficient
- Ability to **write clean, scalable code** that supports long-term maintainability and performance
- Proficiency in **Python** for scripting and automation tasks
- **Bash knowledge** is helpful for task automation and script management at the system level
- Ability to **quickly understand complex tasks** and translate them into practical, automated solutions
- Strong **code design skills** for building robust and effective automation tools
- Experience with C++ is a plus

Additional Requirements:

- **Excellent communication skills** and experience working with both internal and external clients
- Highly **organized,** with strong attention to detail
- Ability to work independently under pressure
- Interest in financial markets is a plus

This position is ideal for someone who thrives in automating processes, improving pipeline efficiency, and solving operational challenges. You'll be a key player in ensuring smooth workflows and system operations, making a significant impact across the team.
